Company Description

Deepscent creates a digital olfactory solution by integrating AI, IoT, XaaS and Digital healthcare technologies with traditional fragrance products.

Deepscent is the only company in Korea that possesses the largest scent dataset, with over 220,000 scent data points. The company has secured various classification and analysis data through this scent dataset, which is applied to its business solutions.

Product

Deepscent Lounge

Function and Usage : Up to 256 fragrance combinations using up to four fragrance capsules.

Smart IoT technology with remote control, scent alarm, recommendation, and access to various content.

Eco-friendly scent capsules developed by elite French perfumers.

Design and mood light functions suitable for interior use.

Remote integrated management system for all devices installed in workplaces and buildings.

Marketing and Selling Points : Deepscent Lounge offers digital olfactory solutions in B2C/B2B/B2G environments.

The Personalized Digital Scent Solution (FOD) provides real-time scent customization and transformation based on individuals' time, location, and purpose.

The Space-tailored digital olfactory solution (FaaS) is an integrated control system that delivers real-time indoor olfactory environments with appropriate scents. It can serve as a real-time central control method in public institutions, hotels, resorts, and smart offices with multiple separate spaces.
