Company Description

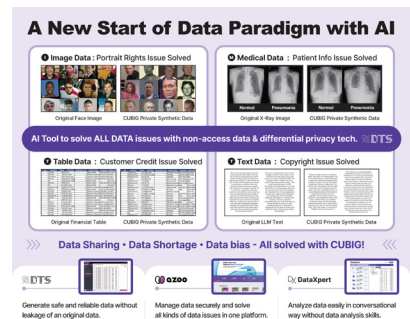

CUBIG provides Data AI Solutions powered by private synthetic data, addressing challenges posed by strict regulations like GDPR. CUBIG offers a full suite of solutions from data generation to utilization. We offers data generation, trading, analysis, and combination solutions maintaining privacy. CUBIG is driving innovation and leading the data ecosystem.

Product

Data AI Tool 'DTS'

Function and Usage : DTS (Data Transform Solution) is an AI-powered private synthetic data solution that allows enterprises to generate high-fidelity private synthetic data while maintaining 99% of the original data's performance. DTS generates data through differential privacy and data non-access technologies to remain the privacy. It supports data generation across all domains and an easy mouse-based interface, protecting privacy and usable across all industries looking to leverage data.

Marketing and Selling Points : DTS is the ultimate solution for unlocking trapped data, enabling enterprises to generate high-fidelity synthetic data with 99% of the original performance—all without accessing original data. It is easy (no coding required), fast (data generation in under 10 minutes), and secure (differential privacy protection). DTS is the only solution that not only enhances data security but also solves augmentation, bias, and labeling challenges, empowering businesses to fully leverage their data with confidence.

Comprehensive Data Solution 'azoo'

Function and Usage : azoo is a comprehensive synthetic data platform that enables enterprises to generate, trade, and validate AI-ready private synthetic data while ensuring compliance with GDPR and other global regulations. It includes DataXpert for LLM and RAG-based data analysis, SynFlow for seamless data integration, SynData for validation, and azoo marketplace for synthetic data trading. azoo empowers businesses to exchange and utilize synthetic datasets, fostering AI innovation while ensuring data privacy and security.

Marketing and Selling Points : azoo is the world's leading synthetic data marketplace, providing an all-in-one solution for data trading, combination, and validation. With 7,500+ datasets and 100,000+ users, it is the largest global synthetic data platform, enabling businesses to legally access and share cross-industry data without regulatory barriers. Users can leverage DTS for free, generate high-fidelity synthetic data, and even monetize their data assets. azoo empowers organizations to unlock new business opportunities, drive AI innovation, and maximize the value of data securely and efficiently.
