Company Description

FRT ROBOTICS is a leading company that creates wearable robots that utilize robotic technology to provide physical support. By developing special-purpose and extreme environment robots for industrial sites, as well as AI software, we are realizing a future environment where humans and robots can coexist.

Product

Step Up 4th

Function and Usage :

StepUp 4.0, a muscle support wearable robot, is designed for industrial use. It corrects posture, reduces fatigue, and prevents back injuries during repetitive or transportation tasks. With a semi active assist system, it enhances safety and efficiency in demanding work environments.

Marketing and Selling Points :

StepUp assists workers' strength in various industries, reducing work fatigue and improving productivity.

It also helps prevent injuries when lifting heavy objects or performing repetitive motions, thus improving the work environment.
